

White – Flowering Wandering Jew / Inch Plant

Rooted Cuttings Growing Instructions

AKA: *Small-leaf Spiderwort, River Spiderwort*
(*Tradescantia fluminensis*)

Hardiness: USDA Zone 9 For colder zones, keep as a houseplant.

Uses: House plants, hanging baskets, shady/damp ground cover.

This Inch Plant/Wandering Jew gets small, delicate white flowers in the late winter / spring on emerald green foliage. It is a perennial to USDA Zone 9 (for certain, because that is where I live). They make EXCELLENT house plants, growing very well in containers at home or the office.

These plants thrive in high humidity/moisture and will reach 18" long/tall. They can grow in sun, but prefer shady locations and would be great as a houseplant. They can survive somewhat dry conditions but do better with more moisture. These make an excellent plant to grow in a hanging basket.

Planting instructions:

Plant your cuttings by laying them down in the soil – either in a pot, hanging basket or on the ground in a shady spot. Cover the bottom 4"-6" (or more if needed) of the stems with soil and keep damp at least until you see them begin growing. These plants grow best in shady areas that get regular water, but can grow in drier conditions. Keep in a warm location.

If planted outside in zone 9 or warmer, these plants will die back with frost/freezing temps but will return in the spring if they don't get too cold. Mine return every year; they are under an oak canopy but we do get temperatures in the 20's during the winter (although not generally for long durations).

These plants can become invasive in tropical areas - plant with care! These make excellent house plants, as they require very little light.

If you have any problem at all, please don't hesitate to email me!
